Mean Time Between Failure (MTBF) of USRPs and Daughterboards

AN-666

For some USRP devices and daughterboards, Ettus Research may be able to provide documentation containing an analysis of MTBF information. Please first review this NI information about MTBF, and then contact Ettus Research technical support with your answers to the questions listed on that NI webpage, as well as noting specifically why you are interested in this information. NI will determine on a case-by-case basis whether to release the requested MTBF information, if it is available, and whether an NDA may possibly be required. Note that we do not have MTBF information for each and every USRP device or daughterboard, and requesting an MTBF analysis does not guarantee that either Ettus Research or NI will be able to provide the requested information.
